

The MATTRACKS System

DESCRIPTION

The MATTRACKS system is being evaluated as a bolt-on/bolt-off capability to the current fleet of HMMWVs. It consists of four individual triangular track systems fastened in place of the vehicle's wheels using standard hand tools without modification of the vehicle. Providing over 3700 square inches of bearing surface, the MATTRACKS system is best suited for use in mud, soft soil, sand and snow with greatly reduced ground pressure.

PROCUREMENT PROFILE:	FY00	FY01
<i>Quantity:</i>	<i>0</i>	<i>0</i>

OPERATIONAL IMPACT

The MATTRACKS system will greatly enhance the Marines capability to traverse marginal terrain to include mud, soft soil, sand, and snow.

PROGRAM STATUS

The MATTRACKS system is in the concept exploration phase.
